Pre-Anesthesia Screening Consent

Your pet is scheduled for anesthesia/surgery and we expect everything to go well, although no procedure can be completely guaranteed. Dr. Heilmeier & Dr. Singley routinely perform a full physical exam on all patients before anesthesia is administered and they will select the safest form of anesthesia available for the procedure to be performed. However, there are other ways to insure we reduce the risk factor for your pet. You wouldn't think of having surgery yourself without pre-laboratory testing to ensure your safety, therefore we recommend the same for your pet. This test can help us rule out any pre-existing internal problems that may not be evident physically but could lead to serious complications. The basic fee of \$30.00 is an additional charge to cover the cost of the blood profile. Please indicate your choice by authorizing or declining this test below.

_____ I hereby accept the pre-surgical bloodwork.

_____ I hereby decline the pre-surgical bloodwork.

Microchip

We can now formally identify your pet if lost or stolen with the use of microchipping.

_____ I hereby accept the implantation of a microchip.

_____ I hereby decline the implantation of a microchip.

Pets Feel Pain Too

Pets can't tell us when they hurt, so it can be difficult to know when they are in pain. But, since the perception of pain is similar for humans and pets, we assume any condition or injury capable of causing pain in humans is also capable of causing pain in pets. Our practice understands the importance of pain management and offers effective methods to meet your pet's specific needs. Administration of medication will be given to reduce pain and discomfort for your pet and to promote a faster recovery.

I hereby authorize Animal Medical Center to perform one of the following surgical procedures on my pet as were discussed with me.
